

Mental health & well-being: how can we come up with innovative solutions to support students?

58%

Of students reported being reluctant to seek help for mental health concerns at school (National Institute of Health, USA)

Mental health issues are very prevalent among students all around the world and a few dare to speak to a responsible adult for various reasons. In addition, these issues lead to lower performances during exams.

The education system is unequipped to face these challenges

The current systems put into place to deal with harassment and low self-esteem issues, such as the Phare system in France, are greatly insufficient, often addressing the issue too late, when the student's suffering has become unbearable to them. **EduCare**, by automatically reporting the students showing signs of hardships, allows the student support teams to act rapidly, directly after the first signs of struggles by students.

Additionally, **EduCare** provides a tool for victims and witnesses to report bullying and harassment events directly on their phones, including anonymously, thus lowering the barrier to seeking help.

Our vision

We envision two parts for our application, one for the students to report the issues they are facing and one for the school to monitor the students. This tool will integrate into the current traditional tracking systems at schools, like Moodle or Pronote, by giving a **different perspective** to school administrators and allowing the support needed to be delivered quickly. The app is a way for the education support team to assess and **react to mental health issues in real time** : one of its main goals is to **create a feeling of connection between the students and their supervisors**.

Our product will be marketed for the public or private education organisation as a subscription.
